Project Title	Sustainable Waste Management Assistant Using Generative AI
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	Revolutionize the loan approval process by implementing advanced machine learning techniques, ensuring faster and more accurate assessments.
Scope	Comprehensive enhancement of the loan approval workflow, integrating ML models for robust, efficient, and scalable decision-making..
Problem Statement	
Description	Current loan approval systems suffer from inaccuracies and inefficiencies, leading to delays, operational bottlenecks, and reduced customer satisfaction..
Impact	Addressing these issues will improve efficiency, reduce risks, and enhance customer trust, ultimately strengthening organizational success..

Proposed Solution	
Approach	Employ machine learning models to analyze and predict creditworthiness, enabling dynamic and adaptable loan approvals.
Key Features	ML-based credit assessment model. Real-time decision-making for faster approvals. Continuous learning to adapt to evolving financial landscapes.

	- Real-time decision-making for quicker loan approvals. - Continuous learning to adapt to evolving financial landscapes.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	T4 GPU
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	1 TB SSD
Software		
Frameworks	Python frameworks	Flask

Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	IDE	Jupyter Notebook, pycharm
Data		
Data	Source, size, format	Kaggle dataset, 614, csv UCI dataset, 690, csv
