

Project Executable Files & Execution Guide

Date	15 JUNE 2026
Team ID	XXXXXX
Project Name	Sustainable Waste Management Assistant Using Generative AI
Maximum Marks	3 Marks

Project Executable Files & Execution Guide:

To successfully evaluate your project, evaluators require access to your source code, live deployments, and clear instructions on how to build and run your application locally. Complete the sections below to document your project repositories and execution steps.

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository (e.g., GitHub, GitLab)	https://github.com/fxw1d70-spec/waste-management-assistance
Live Deployed Application (e.g., Vercel, AWS, Heroku)	https://sustainable-waste-manage-2eadb.web.app/?utm_source=copilot.com

Demo Video Link (Optional but recommended)	https://drive.google.com/drive/folders/1FD7E0Abziemmvzebga4jYsuMJhVJSQIU
--	---

Step 2: Key Executable Files & Folder Structure

Briefly explain the primary directories and where the core execution files are located within your repository.

S.No	Folder / File Name	Description & Purpose
1	backend/	Python backend service and API. - Core file: <code>backend/app.py</code> → Flask server entry point - Supporting modules: <code>backend/ai_service.py</code> , <code>backend/auth_service.py</code> , <code>backend/store_service.py</code> - Dependencies: <code>backend/requirements.txt</code>
2	frontend/	React.js frontend web app (Vite). - Core files: <code>frontend/src/main.jsx</code> (React entry), <code>frontend/index.html</code> (HTML shell) - Pages/components: <code>frontend/src/App.jsx</code> , <code>frontend/src/pages/</code> (Dashboard, Login, MapPage, Scanner) - Config: <code>frontend/package.json</code> , <code>.env.example</code>
3	firebase.json & .firebaserc	Firebase hosting and deployment configuration
4	README.md	Project overview and setup instructions

Step 3: Local Setup & Execution Instructions

Provide a step-by-step guide to installing dependencies and launching the application on a local machine.

Step	Action / Terminal Command	Expected Outcome / Notes
1	<code>git clone https://github.com/fxwld70spec/waste-management-assistance</code>	Downloads the project repository
2	<code>cd backend && pip install -r requirements.txt</code>	Installs backend dependencies (Flask, scikitlearn, pandas, etc.)
3	<code>cd frontend && npm install</code>	Installs frontend dependencies (React, Tailwind, Chart.js, Leaflet.js)
4	Configure <code>.env</code> variables	Setup API keys, Firebase credentials, DB configs as per <code>.env.example</code>
5	<code>npm start</code> (inside frontend folder)	Launches React frontend on <code>http://localhost:3000</code>
